Press Release

Romuald Gallet, appointed Director of Executive Education of Institut Mines-Telecom Business School

Developing executive education is a major challenge for Institut Mines-Telecom Business School. The school therefore creates a department dedicated to that activity, reporting directly to the Dean of the school, and it announces the recruitment of Romuald Gallet as Director since October 12, 2020.

This recruitment is part of the 5-year strategic project adopted by the School Council in November 2019, aimed at significantly developing the revenues linked to executive education by 2024.

After a career as an HR Consultant in the IT / Telecoms sector, Romuald Gallet joined INSEAD, first to structure the career center and then to lead the Executive Education activity for France, Benelux and Southern Europe. Romuald then developed a research center dedicated to family businesses at EDHEC, in charge of all projects related to the financing, the visibility of the structure, and the set-up of a dedicated executive education program. He then headed the school's corporate relations, before joining EMLYON as Director of Executive Education Development. He there worked on the repositioning of the brand, the overhaul of the portfolio and the adaptation to the new regulatory context related to professional education. Lawyer by education, Romuald is also an INSEAD graduate.

"I am happy to welcome Romuald to my management team in order to achieve the school’s ambitions in this area", commented Denis Guibard, Dean of Institut Mines-Telecom Business School. “Romuald brings with him a deep expertise and great transformation and development dynamics. I know above all that Romuald genuinely shares our values of excellence and openness and that he wishes to contribute to the strengthening of our public and socially inclusive School. It will be precious to federate around this major project.”

A public, socially inclusive, higher education institution, Institut Mines-Telecom Business School trains future managers and entrepreneurs to be responsible, innovative and open to the world around them, and to lead their organizations in the major transformations of tomorrow’s society: digitalized economy, energy and ecological transition, new business models and industry of the future. Leveraging its research and education programs, its support of innovation and entrepreneurship, its close relationship with business and its engagement within its territory, the School aims for excellence in contributing to economic development both nationally and locally, while creating value for all its stakeholders.
School was founded in 1979 as part of Institut National des Telecommunications together with its sister engineering school Telecom SudParis, with which it shares its large campus. It remains under the authority of French Ministry of Economy and Industry, and trains 1,500 students each year.
